# Marine Protected Area Monitoring Action Plan

Phase 2: Statewide Long-Term Monitoring

[...]

## Incorporating Existing Approaches

“The MPA Monitoring Program utilizes a partnership-based approach to leverage existing capacity. This approach has established a foundation for generating novel scientific information, tools, and strategies through partnerships with academic institutions, local, state, tribal, and federal governments, citizen science and other organizations, fishermen, and others across the state and beyond”.

# Citizen Science at the California Academy of Sciences

## Snapshot Cal Coast

Annual California statewide effort to document coastal biodiversity by holding a series of bioblitzes up and down the coast

**Bioblitzes and regular monitoring of rocky intertidal**

# Most observed species are rocky intertidal species

*Pisaster ochraceus*

*Triopha maculata*

*Anthopleura xanthogrammica*

*Anthopleura sola*

*Strongylocentrotus purpuratus*

*Okenia rosacea*

*Dermasterias imbricata*

*Mytilus californianus*

*Egregia menziesii*

# Citizen science observations are biased

## Uneven coverage in space

## Uneven coverage in time

# Citizen science observations are biased

## Uneven observation effort

# Extracting signals of change from citizen science data

# Extracting signals of change from citizen science data

# Extracting signals of change from citizen science data

# Extracting signals of change from citizen science data

# How is this useful for management?

## Early-warning indicators of ecological transitions

### Example 1: Monitoring potential population recoveries

# How is this useful for management?

## Early-warning indicators of ecological transitions

### Example 2: Monitoring potential population declines

# How is this useful for management?

## Early-warning indicators of ecological transitions

### Example 3: Monitoring changing ocean conditions

Hopkin's rose nudibranch (*Okenia rosacea*)

Tracking warmer water temperatures?

**Still lots to do – this is only the beginning!**

**We'd love to hear your feedback  
on potential applications**

**Get in touch!**
