HUMPBACK WHALE SONG AND THE SEARCH FOR ALIEN INTELLIGENCE

The study of animal communication challenges our ideas of intelligence and informs the Search for Extraterrestrial Intelligence (SETI). Among the most fascinating and sophisticated of vocalizations are the songs and sounds of humpback whales. Laurance Doyle, Ph.D, Research Scientist with SETI Institute, will share his studies of humpbacks to understand the communications that exist throughout Planet Earth and beyond, at the 7:30 pm lecture.
